

EDGE

A SIX Telekurs display

Edge

Version 3.4

Edge is a modern and powerful terminal that is designed for professionals and active private investors. Edge gives you access to real-time information, national and international news, historical data, FX, Money and Bond market, technical analysis and estimates. With Edge you will quickly find the information that is important and relevant, and you will have the best possible decision basis for your investment. Information is never more than a right-click away.

Extensive configurability

The free floating windows in Edge enable the user to set up a personal and unique view on the market on any number of physical screens. Combined with the smart “tabbed windows” feature and the possibility to link windows to each other, this increases the available information on the screen while maintaining a comprehensive overview.

Unique proprietary content

- **SIX News:** SIX News is one of Sweden’s leading financial newswires, providing realtime news to the Swedish and Norwegian capital market. Our comprehensive news include earnings reports and forecasts, corporate insight interviews and analyst comments.

- **SIX Company Information:** Market calendars, corporate actions, recommendations, financial statements and more on either company or market level is up to date and available from within Edge by the click of a button.

- **SIX Estimates:** With SIX Estimates, you get a complete picture of profit forecasts that affect the market. Features include daily updates of brokerage houses forecasts of about 150 Nordic companies, trend indication showing a very early indication of expected profit development and quick follow-up of report outcomes.

Order entry functionality

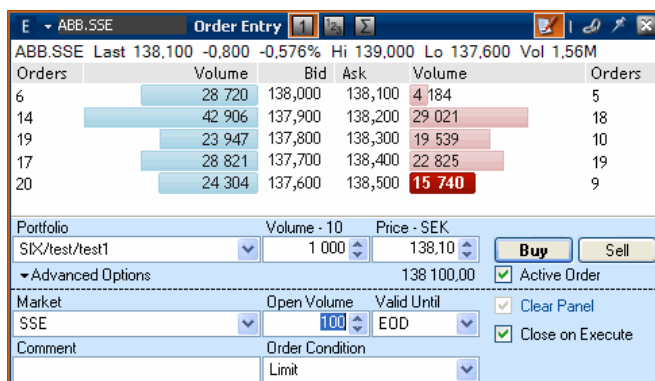

Edge comes with order entry functionality allowing users to easily trade with securities. The order entry functionality offers a number of features to facilitate your trading, e.g. Quick Trade, order entry from news and round lot simulation. More on this on the next page!

Fragmentation management

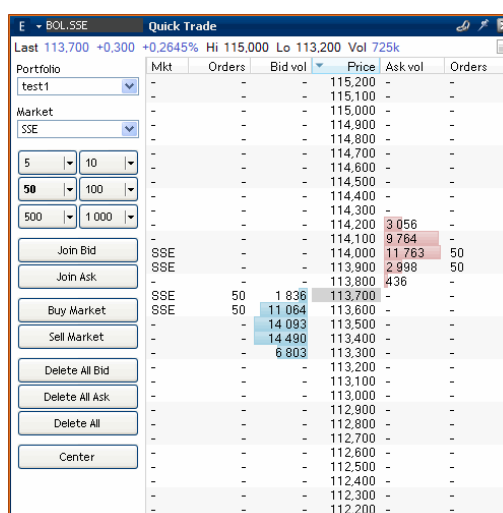

In the light of MiFID and market fragmentation, many of the windows in Edge allow the user to aggregate the information from several market places into one. For example the order book and the instrument trades aggregate information, and in the stock list the BBO cells can be updated from all markets the user is entitled to. Plus, the new fragmentation overview panel shows the division of market shares between trading venues.

Trading with Edge

Edge comes out of the box with order entry functionality and there are several ways of trading from the system. Either you just place the order in an open order book, or you can click on the Bid/Ask prices in the stock list, or why not react fast on a news headline or article by placing an order from it! And, if you are one of the most active traders, you can use the Quick Trade™ panel for a fast and intense order management. The different options for default values, warnings etc. makes sure your trading is smooth and secure.
